

HACKERS

Do you know who's snooping around your network? Most computer networks are constantly being probed by malicious computer hackers using automatic scripts to test their defences. And once inside your network, they only need to find one vulnerable PC in order to get access to your most crucial information.

VIRUSES

The average cost of a UK company's worst security incident of the year is roughly £12,000¹ – with viruses the cause of some of these incidents. Viruses have come a long way from being mere pranks – they can be used to steal passwords and credit card details, or even as 'spam engines' to send unwanted junk mail and more viruses from your email address.

SPYWARE

Who's watching what you do on your PC? If you have spyware installed on it, it could be anyone. Spyware is small computer programs designed to report back on how you use your computer – from your web browsing history to logging everything you type. Not all spyware is malicious, but whether it's a danger or not, you don't want it on your PC where it could pose problems.

PHISHING

If you've had an email lately that looked like it was from a reputable site, but which led you on to something a little less salubrious, you've been subjected to 'phishing'. Phishers attempt to lure you to a site which looks like something legitimate in order to get you to give them credit card or other details. And you'd be surprised how often they fool the unwary.

Keeping your business safe

THE SOLUTION:

BT Internet Security Pack

Email, broadband, mobile working... technology can help your business to work faster and more effectively. But it can also open up new threats to your security. Sixty-two per cent of companies reported a computer security breach in the last year, and yet two-fifths of UK businesses still spend less than 1% of their IT budget on security¹. So how do you make sure your business is properly protected against hackers, viruses and other threats? **BT Internet Security Pack** installs all the software you need to safeguard your PCs in one easy step. Updates are automatic, so you can enjoy complete peace of mind.

Internet Security Pack² gives you full antivirus protection, plus Anti-Spyware, a tool to weed out Spyware, and Anti-Phishing, to guard against ID theft scams. There's also a content filter to provide intelligent advice on potentially dangerous places you may accidentally visit on the Internet and an independent ad-blocker that allows you to screen out unwanted ads.

Internet Security Pack Basic, which provides antivirus and firewall features, is included with **BT Business Total Broadband Options 1 and 2**, and the full pack comes with **Option 3**. Even if you don't have BT Business Broadband, you can enjoy the protection of Internet Security Pack for just £4.99 per month per PC (exc.VAT) including updates.
